

Planting a flower or
cactus

What you will we need?

A small
pot

Some
compost
or soil

Some
small
rocks

Gardening tools

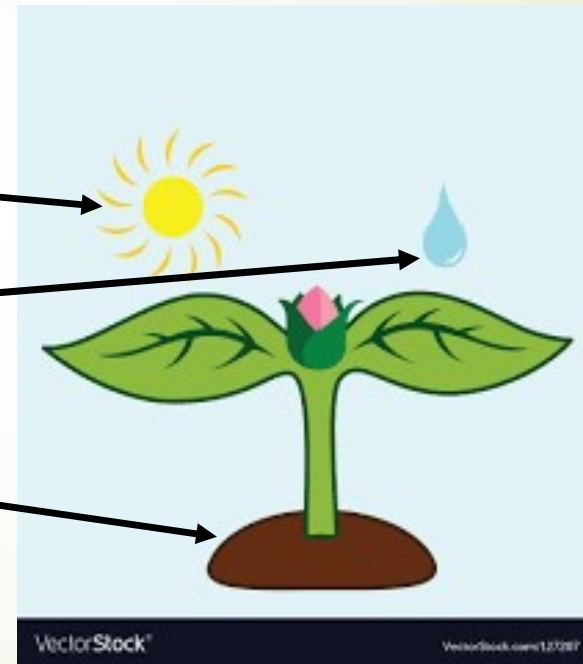

Before we continue I want to remind you the 3 important items for plants, flower and trees to grow are.....

- Sunlight

- Water

- Soil

Cactus or
succulents
cuttings
(without
thorns or
thorns
removed)

Geranium cuttings (sardinella)

Step 1: Put
some rocks in
the bottom of
the pot.

Step 2: Fill put
half way with
soil or
compost.

Step 3: carefully
put your plant
and continue to
add soil
/compost.

Step 4: Water your plant and do so when you notice that soil or compost getting dry.

Your new plants

Take care of your plants and water them regularly. When times come to meet again and continue with our meetings you can bring your plants to add them to our colony garden. I was going to forgot to mention that the flowers we have sowed back in January are now blooming and look like this.
